Professional Summary

Unity Game Systems Developer with 2+ years of professional experience developing and shipping commercial PC and mobile games using Unity and C#. Experienced in gameplay systems, save systems, Steamworks integrations, localization pipelines, platform services, and game publishing. Credited contributor on a Steam Next Fest title with ownership of Steam Cloud, achievements, leaderboards, localization, Crowd Control integration, and live platform maintenance. Strong foundation in C# and .NET across both game and enterprise development.

Experience

Unity Developer — Sector4 Interactive, Kerala, India Feb 2024 – Present

- Developed and shipped commercial PC and mobile games using Unity and C#, from feature implementation through live maintenance.
- Owned gameplay systems, progression systems, save systems, and UI features across multiple shipped titles.
- Integrated Steamworks services including Steam Cloud, Achievements, Leaderboards, and Steam Publishing workflows.
- Integrated Crowd Control SDK, mobile IAP, and third-party platform services into production game builds.
- Managed Steam build configurations, version updates, patch deployments, and ongoing platform maintenance.
- Developed Unity-Arduino hardware integration for educational escape room experiences using serial communication.
- Maintained Steam store releases, deployment pipelines, content updates, and platform configurations for shipped titles.

Junior .NET Developer — StratAgile Pvt Ltd, Kochi, Kerala Nov 2022 – Oct 2023

- Built web and API-based applications using C# and .NET frameworks with React frontends.
- Designed and maintained SQL Server databases; wrote optimized queries and stored procedures.

Junior Data Analyst — StratAgile Pvt Ltd, Kochi, Kerala Dec 2020 – Nov 2022

- Analyzed large datasets to surface business trends and delivered reports using BI tools.
- Translated statistical findings into actionable insights for internal stakeholders.

Featured Projects

Rotted – A Brain Rot Simulator *(Commercial Release | Steam Next Fest Participant)* Steam – PC

Commercially released Steam title and Steam Next Fest participant. As a credited contributor, I owned multiple game systems, Steamworks integrations, and platform-facing features. Participated in Steam Next Fest. Responsible for the full suite of Steam services and core game systems.

- Designed and implemented a local save system and Steam Cloud integration for seamless cross-device persistence.
- Integrated Steam Achievements and Steam Leaderboards alongside a custom backend leaderboard system.
- Built Unity Localization pipeline supporting multiple languages with runtime language switching.
- Integrated Crowd Control SDK enabling live-audience interaction with game events in real time.
- Developed a task system and in-game notification system for player feedback and progression tracking.
- Managed Steam publishing, content updates, version management, and ongoing platform maintenance.

The Curse 404 (Commercial Release)

Steam | Epic – PC

Commercial horror adventure title released across Steam, Epic Games Store, Xbox, and PlayStation platforms. Contributed to the PC platform version and core gameplay systems.

- Integrated Steamworks SDK and Epic Online Services for PC platform support.
- Developed save system handling player progression and checkpoint persistence.
- Implemented player controller, puzzle interaction systems, and object inspection mechanics.

Fast Gear (Commercial Release)

Steam | Epic – PC

Commercial racing title released across Steam, Epic Games Store, Xbox, and PlayStation platforms. Contributed to the PC platform version, including Steam and Epic integrations.

- Integrated Steamworks and Epic platform services including achievements and platform APIs.
- Developed localization support and UI systems for international releases.
- Contributed to race systems, player-facing interfaces, and platform-specific features for the PC version.

Educational Escape Room Experience

PC

Interactive educational experience combining Unity gameplay with physical hardware control via Arduino.

- Developed serial communication layer between Unity and Arduino for real-time hardware control.
- Implemented puzzle progression system with physical door and device feedback integration.
- Designed modular puzzle architecture supporting hydroponics and plant science learning outcomes.

Puzzle Odyssey

Google Play – Android

Mobile word puzzle game available on Android and iOS.

- Implemented Unity IAP for in-app purchase support on Android and iOS platforms.
- Built word selection mechanics using Line Renderer and collider-based interactions.
- Integrated in-app review prompts and save system using PlayerPrefs for progression persistence.

Superdash

Google Play – Android

Hyper-casual mobile game; major contributor to gameplay implementation.

- Contributed major gameplay implementation including merge mechanics using Collider2D interactions.
- Developed progression systems with time-based levels and star rating rewards.
- Optimized game performance for low-spec Android devices targeting offline play.

Core Expertise

Game Systems

Save Systems (Local & Cloud), Progression Systems, Task Systems, Notification Systems, Gameplay Systems

Platform Integration

Steamworks SDK, Steam Cloud, Steam Achievements, Steam Leaderboards, Epic Online Services, Crowd Control

Game Development

Unity 2D/3D, C#, UI Development, Unity Localization, Mobile Monetization (IAP)

Publishing & Operations

Steam Publishing, Build Management, Version Deployment, Platform Maintenance, Cross-Platform Releases

Education

B.Tech in Computer Science & Engineering

Aug 2016 – Aug 2020

Rajadhani Institute of Science and Technology, APJ Abdul Kalam Technological University, Kerala

Technical Skills

Game Development: Unity, Steamworks SDK, Epic Online Services, Crowd Control, Unity Localization

Programming: C#, .NET, SQL, C++, Python

Platforms: Steam, Epic Games Store, Android, iOS, PC

Tools: Git, SVN, Visual Studio, Aseprite
